

EPS is durable

EPS has been used successfully for decades and lasts a building's lifetime. This has been clearly proven by a Swiss study about the long-term behaviour of EPS.

Source: Study "Resistance of EPS to ageing, using long-term evidence" written by Carbotech AG, Basel in cooperation with S-E-E.ch, St. Gallen

- According to the Environmental Product Declaration EPD-IVH-2009311-D, properly installed EPS insulation products display long-term stability in terms of their dimensions (length, width, thickness) and their building physical properties. They are water resistant and are not degraded by micro-organisms. If properly handled and installed EPS insulation materials will last as long as the building they insulate.
